XiSync 犀同步

CONFIDENTIAL · NOVEMBER 2026

The back office exporters never had.

XiSync unifies global media buying, per-shipment compliance, omnichannel buyer conversations and trade execution into one trade workspace — built for the micro, small and medium exporters that carry China's cross-border trade but have never been able to afford enterprise software.

01 Global media buying	02 Compliance readiness	03 Alibaba · MIC · 1688
04 Product studio	05 Multilingual storefront	06 One inbox, five channels
07 Shipping prediction	08 Export credit eligibility	09 Trade command centre

ADDRESSABLE MARKET
5,000,000 exporter businesses

PRICING
$139 / business / month

SECOND REVENUE STREAM
10% of media spend

YEAR-5 PLAN
$9.76M ARR · $10M cap

Pre-revenue. Every forward-looking figure in this deck is a projection built on the stated assumptions — not a result, not a promise.

THE ONE-LINE ARGUMENT

Small exporters lose deals in the gaps between tools.

Between a WhatsApp message and a cleared container, the work still runs on spreadsheets, personal phones and agents. XiSync closes those gaps in one workspace.

01

Own the conversation

Buyers message on WhatsApp, Instagram, TikTok and Facebook. The team answers from WeChat. XiSync is built to pull every channel into one inbox and return the reply on the channel it arrived on.

02

Own the compliance graph

Every destination market demands a different set of mandatory fields per shipment. We are encoding each field, each document and each regulatory change — per country, not per template.

03

Own the money flow

The business is the entry ticket. The ad budget is the revenue: the model is to place global media directly and keep 10% of the spend we manage, with no agent in the middle.

WHAT WE ARE NOT

Not a marketplace — we do not compete with Alibaba or Made-in-China for buyers. Not a freight forwarder — we price and predict, carriers move. Not a generic CRM — the compliance and document layer is the reason a customer cannot simply rebuild this in a spreadsheet.

WHAT HAS TO BE TRUE

Someone pays $139 per export business per month, and enough of them spend on global media that the 10% compounds on top of the subscription. The rest of this deck is about proving those two things are reachable.

Nine jobs, nine tools, one person holding it together.

A 10-person export company runs media, compliance, marketplaces, content, a website, five chat apps, freight and credit — usually with one person who "knows the system".

THE JOB	COST OF THE STATUS QUO	WITH XISYNC
Buy global media Agent places ads; account sits with the agent	15–20% agent markup; no attribution to export orders (est.)	Direct platform accounts, creative from the studio, 10% commission
Ship documents 6–10 documents, per country, per shipment	4–8 hours of a clerk per shipment; one missing field stops the container	One rule base per destination, with a readiness score before dispatch
Keep catalogues aligned Alibaba, Made-in-China, own site	10–20 hours a week re-keying SKUs; prices and stock drift apart	Two-way SKU, price and inventory sync
Produce product content Photographer, editor, translator	$110–420 and 2–4 weeks per SKU (est.)	Upload a product; get video, images and copy in six languages
Run your own channel Website, SEO, buyer portal	$4,200–11,100 agency build, then it goes stale (est.)	Multilingual storefront generated from the live catalogue
Answer buyers WeChat inside, WhatsApp outside	Personal phones, no history, no handover; replies measured in days	One inbox, five channels, reply on the same channel, translated
Price freight Phone calls to three forwarders	Blind rate shopping; 5–8% overpay on freight (est.)	Rate comparison, carrier integrations, arrival prediction
Get paid safely Export credit, Sinosure-style cover	Weeks of paperwork; uninsured receivables; no pre-check	Eligibility pre-assessment from buyer and order data
Run the business Command centre, weekly review	Reporting rebuilt by hand each week; the picture lags the business	One command centre over pipeline, shipments, cash and spend

AGGREGATE COST OF THE STATUS QUO

$49,000–97,000 a year for a ten-person export team.

Estimate built from the per-job figures on this page — before counting the orders lost to slow replies. Nothing here is a measured customer result.

Five shifts that make this buildable now, not in 2022.

BUYERS

Buying moved to chat

Cross-border sourcing conversations now start in WhatsApp, Instagram, TikTok and Facebook — channels a WeChat-based team cannot natively answer.

→ A channel-native inbox is a prerequisite, not a feature.

RULES

Compliance fragmented

EU GPSR has applied since December 2024; CBAM moves into its definitive phase from 2026; tariff schedules keep changing. Per-shipment field matching no longer fits in a template.

→ Per-country rule data becomes an asset.

COST

AI became affordable

At $4–10 of inference per business per month, a $139 subscription can carry real AI work on every document and every message — the margin simply did not exist before.

→ The unit economics finally close.

SELLERS

Marketplace fatigue

Sellers want their own domain, their own buyer data and their own ad account. Paying rent to a marketplace for demand is no longer the only option they see.

→ Own-site plus own-ads is the pull.

POLICY

Hainan Free Trade Port

Hainan is being built as a free-trade-port jurisdiction with island-wide customs operations, giving a China-facing service business a compliant, RMB-native operating base.

→ Fospe China can invoice locally.

THE WINDOW

Enterprise trade software is priced for companies with a customs department. The SME segment is large, digitally active and has no native operating system — but it is only reachable while the channels are still open and the category is unformed.

The exporter nobody sells to.

The wedge is a company that already sells abroad, already pays for marketplace membership, already buys ads through an agent, and has no system of record for any of it. The founder is the buyer and the user in the same conversation.

THEY ALREADY PAY FOR

Marketplace membership · ad agency retainers · product photography · a website that no one updates · two or three chat apps · a forwarder relationship.

THEY DO NOT HAVE

A CRM · a document engine · a compliance rule base · an ad account in their own name · any attribution from ad spend to orders.

SEGMENT DEFINITION

Export revenue	$0.7M – 42M
Export staff	1 – 50
Buying unit	One business account
Decision maker	Founder / export director
Deployment	Browser, same day
Price tolerance	$139 / business / month

WHY THIS SEGMENT IS WINNABLE

Enterprise vendors charge 5–10× more per business and need implementation partners. Local trade CRMs stop at the pipeline. Agencies deliver projects, not software. The marketplace owns the buyer but not the workflow. Each leaves the same gap open.

5.0M
EXPORTER BUSINESSES IN CHINA · TAM

2.0M
ALREADY SELLING THROUGH DIGITAL CHANNELS

$139
PER BUSINESS, PER MONTH

≈7%
OF ONE EXPORT HIRE'S ANNUAL COST

One workspace where the ten tools used to be.

The nine areas are not nine products bolted together. They read and write the same five objects — buyer, product, shipment, document, spend — which is why the platform compounds as each module comes online.

DEMAND	1 · GLOBAL MEDIA BUYING · 2 · PRODUCT STUDIO · 3 · OWN GLOBAL WEBSITE · 4 · MARKETPLACE SYNC	Creates demand and owns the ad account
EXECUTION	5 · OMNICHANNEL INBOX · 6 · COMPLIANCE READINESS · 7 · SHIPPING PREDICTION · 8 · CREDIT ELIGIBILITY	Converts, documents and moves the order
INTELLIGENCE	9 · TRADE COMMAND CENTRE · BUYER × PRODUCT MATCHING · TRADE ANALYTICS · TARIFF & RISK ALERTS · QUOTE DRAFTING	Tells the team what to do next

ONE BUYER IDENTITY

The same buyer across WhatsApp, Alibaba, the inbox, the quote and the shipment. No re-typing, no duplicate records, full history at the moment of the reply.

ONE DOCUMENT ENGINE

Compliance fields, quotes, proforma invoices and shipping documents are assembled from the same order object, so a change in the order cannot leave a stale certificate behind.

ONE COMPOUNDING MODEL

Ad spend, replies, documents and shipments all feed the same matching and prioritisation model. A customer who adds a module makes every existing module more accurate.

● LIVE working code on a real database ● PARTIAL core works, integration missing ● PROTOTYPE UI and logic, simulated endpoints

Audited against the codebase · appendix B

GLOBAL MEDIA BUYING

Their media budget, placed without an agency.

REVENUE STREAM · PROTOTYPE

TODAY

An agent opens the ad account in their own name, builds the creative, and bills a markup. The exporter cannot see the auction, cannot export the audience, and cannot prove which campaign produced which container.

15–20%
agent markup on spend (est.)

0
orders attributed to a campaign

WITH XISYNC

The exporter publishes directly on the global platforms from inside XiSync. Creative comes from the product studio, audiences come from the buyer record, and every campaign is measured against inquiries and orders — not impressions.

10%
flat commission on managed spend

Own
ad account, audience and data

PLATFORMS

Meta (Facebook, Instagram), Google, TikTok, Snapchat. Campaign orchestration, budgets and creative in one place, with a global kill switch.

WHY IT COMPOUNDS

Every campaign produces buyer × product signal. That signal trains the matching model on the next page, which raises the return on the next campaign.

WHY IT IS A BUSINESS, NOT A FEATURE

Commission scales with the customer's ad budget, so revenue per account grows without adding businesses — a second stream that compounds on the same customer.

PROTOTYPE — Built: campaign orchestration, spend ledger with budget caps, and the pre-flight creative screen. Not built: live ad-platform calls and billing — connectors run against simulated responses until each platform grants developer access.

COMPLIANCE READINESS

Every border has its own paperwork. We encode it.

THE MOAT · PROTOTYPE

TODAY

Documents are matched by hand, per shipment, from a folder of last year's files. Each destination asks for a different field set. A single missing or inconsistent field holds the container at the port — and the clerk who knew the rule has left.

6–10
documents per shipment

4–8 hrs
of manual matching

WHAT GOES WRONG

Port storage and demurrage, re-issued certificates, missed sailing dates, a buyer who now trusts the next supplier more than you.

WITH XISYNC

The compliance centre is designed as a field-level rule graph per destination market: which document, which field, which format, which authority, which exception. The engine is built to fill every mandatory field from the order, flag what it cannot verify, and keep the rule base current as regulations change.

Field graph · next
Per country, per document, per product class

Auto-fill · next
Values pulled from the order and buyer record

Change feed · next
Regulatory updates pushed into open orders

Readiness · built
A score per shipment before it leaves the factory

WHY THE ASSET IS HARD TO COPY

The rule graph we are funding is not a prompt. Each market takes months to encode and is validated shipment by shipment; the rejections tell you which field was actually wrong. Built today: a readiness engine over eight document types and four market blocs. Built next, with this round: the first six per-country field libraries.

Decision support, not legal advice. Rules are sourced and cited per field; the exporter remains responsible for the declaration.

ALIBABA & MADE-IN-CHINA

One catalogue that keeps every channel in step.

Sellers list the same product on Alibaba, on Made-in-China and on their own site. When one price changes, the other two are wrong by lunchtime. XiSync makes the catalogue the source of truth and pushes it outward in both directions.

PROTOTYPE

Built: the adapter interface, catalogue model and two-way sync job, running against a seeded ICBU-shaped feed. Not built: live seller authorisation and marketplace app review — the gate before the Year-4 channel plan.

A

Import once

Pull every live listing, SKU and specification into one catalogue, mapped to the internal product record rather than re-typed from a spreadsheet.

B

Sync both ways

Price, stock and status changes propagate to the marketplace listings and to the XiSync storefront. Incremental sync for speed, full reconciliation for drift.

C

Reuse the content

One product record feeds the ad creative, the website page, the quote and the shipping documents — so a specification is entered once and never contradicts itself.

STRATEGIC RELEVANCE — NOT JUST AN INTEGRATION

The marketplace seller base is our distribution channel for Year 4 and Year 5. Deep integration is what makes a marketplace-led referral programme credible instead of a banner on a partner page.

We are not asking Alibaba to sell for us. We are making the integration good enough that a seller who already lives in the marketplace can adopt XiSync without re-entering their catalogue.

PRODUCT STUDIO

A product photo in, a running campaign out.

CONTENT VELOCITY · PARTIAL

TODAY

A new SKU needs a photographer, an editor, a translator and a week of coordination before it can be advertised at all. Most small exporters simply do not list the long tail of their catalogue, so their best product is often the one nobody can see.

2–4 wks
per SKU (est.)

$110–420
per SKU (est.)

WITH XISYNC

Product video

Generated from photos and specification, in platform-native aspect ratios

Image set

Hero, detail and lifestyle frames — template-rendered today, generative next

Copy

Title, bullets and description in the format each channel expects

Ready to publish

Packaged per channel — ad, storefront and marketplace formats

Status: the Veo client and job UI are built and return a rendered file once a key is provisioned; without one they run in demo mode. Image sets are template-rendered today — generative frames are the next build, scoped into this round.

WHY IT MATTERS COMMERCIALLY

Content is the binding constraint on ad spend. Every product that becomes advertisable increases the customer's media budget — which increases our commission. The studio is not a creative toy; it is the intake valve for the revenue stream that matters most.

OWN GLOBAL WEBSITE

A storefront that answers in the buyer's language.

PROTOTYPE

Built: the builder, the section model and the multilingual content structure. Not built: publishing to the CMS tables, domain and SSL, and buyer-portal login.

WHAT THE CUSTOMER GETS

Multilingual — English, French, Spanish, German, Arabic and more, with a content model per language

CMS-backed — page and section model defined; the publish pipeline is in build

Catalogue-synced — a price change on the product record updates the page

SEO and analytics — metadata, sitemap, domain and tracking designed into the page model

Buyer portal — quotes, orders and shipment status behind a login (in build)

THE ALTERNATIVE

An agency builds a brochure site for $4,200–11,100, hands over a login, and the product list is out of date within a quarter. It does not know what is in stock, it does not talk to the marketplace, and it cannot serve a buyer who writes in French.

WHY IT CHANGES THE ECONOMICS

A storefront turns a one-off agency invoice into recurring software revenue, gives the exporter a destination for paid traffic, and creates a second surface where the catalogue must stay consistent — which is exactly where our sync engine earns its place.

Traffic

Ads and marketplace referrals land on a domain the exporter owns

Conversion

Inquiry forms write straight into the omnichannel inbox

Retention

The site, catalogue and buyer portal make switching expensive

OMNICHANNEL COMMUNICATION

WeChat on one side, WhatsApp on the other, one inbox.

THE REAL PAIN

PARTIAL

THE STATUS QUO

One salesperson's personal phone holds the relationship. Nobody else can see the thread. When they leave, the buyer leaves with them. WhatsApp needs a workaround, the English is answered at midnight, and Instagram messages are simply never opened.

WhatsApp	Snapchat	Instagram	Facebook	TikTok
Business API	Direct	Direct	Messenger	Direct

IN

One inbox. Every channel, every salesperson, attached to the buyer record with the quote and shipment history beside it.

OUT

Replies are composed against the channel the message arrived on. Delivery connectors are the next build; today every message persists to the conversation record.

THE METRIC WE MANAGE

First response time. In cross-border trade the first credible reply usually takes the inquiry — so minutes, not days, is the product promise.

5
CHANNELS MODELLED

1
INBOX, WITH HANDOVER

0
DELIVERY CONNECTORS LIVE

Built: a tenant-scoped conversation and message store, channel tagging, handover and the reply composer. Not built: WhatsApp Business, Meta, TikTok and Snapchat delivery — platform approval is the gate, and it is scoped into this round.

SHIPPING PREDICTION

Freight costed before the quote.

PARTIAL

A lane-based rate and transit model across FCL, LCL, air and rail, using the weight, volume, incoterm and destination port already attached to the order.

- Eight modelled lanes priced; live carrier rates in build
- Transit-time and arrival prediction per lane
- Deviation alerts against the quoted transit time (in build)

Status quo: three phone calls, a screenshot, and a guess — with an estimated 5–8% overspend on freight.

CREDIT ELIGIBILITY

Credit checked before the container.

PROTOTYPE

A transparent eligibility score over the buyer, destination, payment terms and order history — seven weighted inputs and a static country-risk table, with every input shown to the user.

- Buyer and country risk screening, rule-based
- Eligibility signals with the gaps listed — no Sinosure feed yet
- Payment-term guidance per buyer, deterministic today

Status quo: weeks of paperwork, or no cover at all — and the loss sits on the exporter's balance sheet.

WHY THESE SIT INSIDE THE PLATFORM

Both are prototypes: deterministic models over the order data, with no carrier API and no Sinosure feed yet. They are only accurate if the order, the buyer and the documents already live in the same system — which is why they sit here, not as standalone calculators.

BEYOND THE NINE

Nine tools is the floor, not the ceiling.

Grouped by what the customer is trying to do — not by how the software is built.

A · COMMAND

Know what to do today

Trade command centre — one screen for the book, the pipeline and the exceptions.

Daily briefing — what moved, what stalled, what needs a decision before noon. Rule-based today.

Action queue — ranked next actions per account, not a notification feed.

Order anomaly detection — margin, timing and document exceptions flagged early.

Tariff and risk alerts — changes that affect open orders and open quotes.

B · MATCHING

Put the right product in front of the right buyer

Buyer × product matching — scores every live buyer against the catalogue, with the score explained.

Staged workflow — suggested → reviewed → contacted → quoted, so a human stays in the loop.

Trade analytics — conversion by channel, product, country and salesperson.

Quote drafting — price, MOQ, tariff and margin composed into a sendable quote.

CRM — leads, accounts, deals and activity in the same record as the conversation.

C · EXECUTION

Move the order without dropping a field

Document readiness — a completeness score per shipment, per destination.

Logistics — bookings, containers, milestones and exceptions.

Compliance lifecycle — certificates, expiry, renewals and country rules.

Shipping prediction — rates plus arrival dates.

Credit eligibility — insurability before dispatch.

D · WORKSPACE

Run a team, not a login

Multi-tenant workspaces — one tenant per company, roles per function.

Buyer portal — quotes, orders and tracking behind a branded login (in build).

CMS website builder — the storefront as a managed surface (prototype).

Integration layer — adapters defined for marketplaces, ads, messaging and carriers.

Audit and permissions — who saw which buyer, who changed which price.

Live today: CRM records, deals, conversations and tenant workspaces on Postgres. **Prototype:** command centre, briefing, matching, analytics, quote drafting, document readiness and alerts — deterministic logic on local state, not yet a service. The $250k turns compliance and marketplace sync into services first.

THE POINT FOR AN INVESTOR

This is why the business is defensible. A customer does not buy a media tool and a compliance tool; they buy the place where the whole export week happens. That is what makes churn fall as the account matures.

The screens copy fast. The rule base does not.

A competitor can reproduce the screens in a quarter. None of the five mechanisms below exists as a finished asset; each takes longer than a quarter to earn, and they reinforce each other.

MECHANISM	WHY IT IS HARD	COPY TIME (EST.)
Per-country rule graph Compliance centre · in build	Four market blocs and eight document types are encoded today. Each market needs its own fields, formats and exceptions; encoding one properly takes months and is validated shipment by shipment. The first six per-country libraries are what this round funds.	**18–24 mo**
Rejection outcomes Document engine	Which field actually caused a hold, at which port, for which product class. We do not hold this dataset yet; it only accumulates by operating real shipments, and it is why the rule graph improves with volume.	**Not buyable**
Channel certification WhatsApp, Meta, TikTok	Business API access, ad account permissions and message history require platform approval, technical review and a track record. Trust is not a code problem.	**6–12 mo**
Interaction data Matching model	Buyer × product × campaign outcomes would train the matching model. The score is rule-based today; with volume it becomes a learned ranking that a new entrant cannot reproduce without the same history.	**Compounds**
Workflow gravity Whole platform	Quotes, documents, shipments, ads and conversations in one place. Replacing us means replacing the record of the last two years, not a feature.	**Rising**

THE HONEST COUNTER-ARGUMENT

Alibaba could build this. So could a well-funded local CRM. Our answer is speed in the compliance and channel layer, and a price point they cannot serve without cannibalising enterprise revenue.

WHAT WE WILL NOT CLAIM

We have no exclusivity, no data partnership and no signed distribution agreement today. The moat is built by operating, not by contract.

HOW TO TEST IT IN DILIGENCE

Ask to see the readiness engine and the eight document types it scores today. The per-country rule graph is the asset this round funds; the interface is the easy part.

FIVE MILLION BUSINESSES · PENETRATION STATED EVERY YEAR

Five million exporters. 2% is plenty.

Registration is free-tool reach. Paying is the plan. Both are divided by the same 5,000,000.

MARKET PENETRATION	YEAR 1	YEAR 2	YEAR 3	YEAR 4	YEAR 5
Registered businesses	**350**	**1,800**	**9,000**	**38,000**	**100,000**
— share of the 5M TAM	0.007%	0.036%	0.180%	0.760%	2.000%
Paying businesses, exit	**12**	**70**	**400**	**1,900**	**5,300**
— share of the 5M TAM	0.0002%	0.0014%	0.0080%	0.0380%	0.1060%
Paying ÷ registered	3.43%	3.89%	4.44%	5.00%	5.30%
ARR at exit	**$22k**	**$129k**	**$737k**	**$3.50M**	**$9.76M**

Penetration is simply the row above divided by 5,000,000. At $1,842 a business, the whole market is $9.2B a year; at the plan's mix the Year-5 paying base is worth $9.76M of ARR.

WHAT THE 5M IS MADE OF	BUSINESSES	BASIS
Import-export right or cross-border sales	**5,000,000**	**Assumption — broad definition of the addressable population**
— of which recorded customs trade	700,000	Public range; a subset, not the whole market
Selling through a digital channel	2,000,000	40% assumption — the serviceable base
Paying in Year 5 · 0.106% of TAM	**5,300**	**Plan**

PAYING SHARE OF THE MARKET

0.106%

of 5,000,000 businesses pay us in Year 5 — 5,300 accounts and $9.76M of exit ARR. Registered reach reaches 2%; paying stays near a tenth of one percent.

WHAT EARNS 2% REGISTERED

Channel distribution. Seven routes, four of them partner-led: associations, forwarders, resellers and marketplace placement put the free tool in front of members at low CAC.

Free-tool entry. Compliance checklists, the document engine and the product studio are free. The subscription starts when a business ships through us.

Policy tailwind. Hainan free-trade-port and SME digitisation programmes subsidise adoption and route members toward accredited software.

2% IS THE FLOOR, NOT THE STRETCH

100,000 businesses is 2% of the 5M market over five years — a reachable share, not a heroic one, because registration rides free tools and partner distribution. It is also the minimum the paying plan needs: at 70,000 registered, 5,300 paying businesses would require 7.6% conversion, above the range we would defend. Reach is the marketing number; 0.106% paying is the plan.

Everyone owns a slice. The week has no owner.

WHERE EACH ONE STOPS

Enterprise trade suites	Deep compliance and logistics, priced and implemented for companies with a customs department. No media buying, no SME motion.
Global horizontal SaaS	Excellent CRM and marketing, but no per-country document engine, no marketplace sync, no China sales motion.
China trade CRMs	Pipeline and email sequences. They stop before documents, ads, storefront and carrier data — the expensive half.
Agencies & service shops	Projects, not software. The knowledge walks out with the account manager and nothing compounds.
Marketplaces	Own the buyer relationship and the traffic. They have no reason to give the seller an independent ad account or an owned storefront.

POSITIONING IN ONE LINE

We are not competing with Alibaba for demand. We are the layer that lets an exporter keep the demand it already has — and pay for the next wave on its own terms.

One subscription, one commission, one expanding budget.

STREAM 1 · SUBSCRIPTION

FROM YEAR 1

$139 /business/month

Per export business, billed annually in advance. The anchor price is RMB 1,000 a month at 7.20 RMB/USD — $1,667 a business a year. Every person who touches the order — sales, documentation, logistics, finance, management — is included. No per-head pricing, no implementation fee.

Benchmark: $1,667 a year is roughly 7% of the fully loaded cost of one export salesperson in China — and it replaces the tooling of five.

STREAM 2 · MEDIA COMMISSION

SCALES WITH THE CUSTOMER

10% of managed ad spend

We place ads directly on global platforms and keep 10% of the spend we manage. The customer's ad budget grows as their catalogue becomes advertisable — so revenue grows without a new business being sold.

Assumed: 35% of businesses buy media, at RMB 3,000 (≈$417) per buying business per month. That adds $175 a year per average business on top of the subscription.

WHAT ONE PAYING BUSINESS IS WORTH

Subscription · one account	$1,667
Commission · blended at 35% media adoption	$175
Annual value at the plan's mix	**$1,842**

A business that runs media at the assumed $5,000 a year pays $500 of commission, not $175 — the blended figure is what the P&L uses. Ad spend can double without a new account being sold.

EXPANSION, WITHOUT A NEW PRODUCT

One account covers the founder, the sales desk, documentation, logistics and finance. There is no per-head meter to argue about, so adoption spreads inside the business; expansion then shows up in ad budget and in a second exporting entity, not in a licence count.

WHY NOT CHARGE MORE

$139 a month is a deliberate ceiling: it sits below the level at which a founder needs a committee decision, and it is defensible against the agency and marketplace spend it replaces. Price is a wedge, not the margin story — the model takes 92.6% gross margin at this price.

Three motions, and the third one decides everything.

YEAR 1

Founder-led

Direct selling into about 40 accounts in two or three exporting clusters. The founder demos, closes and onboards. Target: 350 registrations and 12 paying businesses.

Why: the first customers define the compliance coverage and the onboarding path. They cannot be delegated.

YEAR 2–3

Inside sales + referral

Three to five reps on low-touch cycles, plus referrals from existing customers, trade associations and marketplace-seller communities. Target: 70 → 400 paying businesses.

Why: the ACV is too small for field sales and too large for pure self-serve. Inside sales is the bridge.

YEAR 4–5

Channel + self-serve

Marketplace-seller programmes, trade associations, local resellers, the Hainan programme and a self-serve funnel. Target: 1,900 → 5,300 paying businesses.

Why: 10 reps cannot add 4,336 businesses in a year. The channel has to carry four fifths of it.

YEAR	GROSS NEW PAYING BUSINESSES	TEAM-ASSISTED CLOSES	PARTNER + SELF-SERVE
Year 1 · 2 reps	14	14 · 100%	—
Year 2 · 3 reps	71	60 · 85%	15%
Year 3 · 5 reps	400	240 · 60%	40%
Year 4 · 7 reps	1,822	595 · 33%	67%
Year 5 · 10 reps	4,336	850 · 20%	**80%**

THE CAPACITY TEST

At 85 team-assisted closes per rep, 10 reps carry 850 of 4,336 businesses — 20%. The other 80% has to come from partners and self-serve, which is why the next pages price channels rather than headcount. Team-assisted closes are counted inside the channel the account arrived through, so both tables describe the same 4,336 businesses.

FIRST THREE CHANNEL BETS

1 · Marketplace-seller success programmes. 2 · Export-cluster trade associations. 3 · Local resellers in five manufacturing belts. None is signed today.

YEAR 4 → YEAR 5

4,336 new businesses, seven channels, one sum that closes.

5,300 exit = 1,900 opening − 936 churned + 4,336 gross new · blended CAC $600 = $2.60M ÷ 4,336

CHANNEL	Y5 BUSINESSES	MECHANISM THAT PRODUCES THE VOLUME	ACCTS × BUSINESSES	CAC	PAYBACK
Self-serve product-led Free tools as the hook	**1,548** 35.7%	Free compliance checker and shipping-rate predictor, no login. The free result creates the account; the subscription unlocks the document set and the inbox.	774 × 2.0	$150	1.1 mo
Marketplace in-platform Alibaba · MIC · 1688	**900** 20.8%	App listing in the seller backend plus a "connect your catalogue" button. The seller already lives in the platform; we remove the re-keying, not the marketplace.	450 × 2.0	$900	6.3 mo
WeChat mini-program Entry point, not a CRM	**570** 13.1%	Quote and compliance checker inside WeChat, shareable into trade groups. The salesperson forwards a result; the buyer's colleague installs it. Distribution rides the group chat.	285 × 2.0	$220	1.5 mo
Associations & chambers Cluster-level deals	**410** 9.5%	The association endorses a member benefit at a negotiated discount and co-runs onboarding webinars. One signature reaches ten companies in the same export cluster.	82 × 5.0	$420	3.0 mo
Forwarders & customs brokers Referral network	**288** 6.6%	The broker already sees the shipper's document chaos. A referral link, a co-branded readiness report, and a fee on each converted account.	72 × 4.0	$520	3.7 mo
ERP / agency / trade-service resellers Carries the high end	**450** 10.4%	Partners who already implement ERP or trade services resell XiSync to their 10-plus-business clients, with implementation and first-line support included.	45 × 10.0	$980	6.9 mo
Hainan FTP programmes Policy-linked, capped	**170** 3.9%	Co-funded SME digitalisation programmes run from Hainan, where our operating entity already sits. Small on purpose: policy timing is outside our control.	34 × 5.0	$380	2.7 mo
Total gross new businesses	**4,336**	Blended CAC is the P&L line: $2.60M ÷ 4,336 businesses.	1,742 accts · 2.5× avg	**$600**	**4.1 mo**

PARTNER MATHS, AT YEAR 5 RUN-RATE

PARTNER TYPE	PARTNERS	BUSINESSES EACH	RAMP TO RATE	REVENUE SHARE	WHAT THE PARTNER GETS
Marketplace platforms	2	450	6 mo	15% yr 1	App engagement and seller retention
Associations	41	10	9 mo	10% yr 1	Non-dues revenue, member benefit
Forwarders & brokers	24	12	3 mo	10% yr 1	Stickier shippers, service referrals
Resellers	15	30	9 mo	25% yr 1	A product to sell without building one
Hainan programmes	5	34	12 mo	—	Policy KPI on SME digitalisation

Partner share averages $259 per business sold through a share-bearing partner — $0.53M, or 20% of the $2.60M sales & marketing line.

CHANNELS CONSIDERED AND REJECTED

Paid search and social at scale. CAC above $1,200 against a $1,842 annual business; used only as a top-up inside the self-serve funnel.

Trade-show field sales. Above $1,500 per business and no repeatability at this price point.

Government export-service portals. Twelve-month procurement cycles and a local-presence requirement.

Banks and payment providers. No workflow surface to attach to, so no attribution and no retention.

Content and SEO alone. Compounding but too slow to deliver 1,500 businesses inside one year.

WHERE THE $600 COMES FROM

The $600 CAC is arithmetic, not a claim.

Payback uses Year 5 gross profit of $142 per business per month. LTV is that gross profit ÷ 26% churn, undiscounted and with no expansion revenue.

CHANNEL · YEAR 5	NEW BUSINESSES	ACQUISITION SPEND	OF WHICH PARTNER SHARE	CAC / BUSINESS	PAYBACK, MO	LTV : CAC
Self-serve product-led	1,548	$232k	—	$150	1.1	44×
Marketplace in-platform	900	$810k	$225k	$900	6.3	7×
WeChat mini-program	570	$125k	—	$220	1.5	30×
Associations & chambers	410	$172k	$68k	$420	3.0	16×
Forwarders & customs brokers	288	$150k	$48k	$520	3.7	13×
ERP / agency resellers	450	$441k	$187k	$980	6.9	7×
Hainan FTP programmes	170	$65k	—	$380	2.7	17×
Brand, events & unattributed	—	$606k	—	—	—	—
Blended · all channels	**4,336**	**$2.6M**	**$529k**	**$600**	**4.1**	**11×**

Acquisition spend is new businesses × channel CAC; the total reconciles to the $2.60M sales & marketing line in Year 5. Partner share is 15% of first-year subscription for marketplace, 10% for associations and forwarders, 25% for resellers — $0.53M, about 20% of that line and already inside the $600 CAC.

WHERE PARTNER SHARE SITS — AND WHY

In **sales & marketing**, not cost of revenue. It is paid once, on a new business, and it is already inside the channel CAC figures above. Booking it in COGS as well would double count it; and COGS should carry the cost of serving the installed base, not of buying it.

TWO CAC VIEWS, ONE P&L LINE

$460 per business on channel-attributed spend of $1.95M; **$600** all-in once $0.60M of brand and unattributed spend is added. The $2.60M total is the sales & marketing line in the P&L — not a separate budget.

WHAT THE TABLE SAYS

Every channel pays back inside **7 months**. The weakest is resellers at **6.7× LTV:CAC** — still funded from year-one gross profit. Self-serve is the cheapest and the least certain.

What has to be hired, kept and measured.

SALES AND SUPPORT CAPACITY AT 5,300 BUSINESSES

FUNCTION	HEADS	RATIO
Direct sales	5	85 closes per rep per year — 425 businesses, top accounts
Partner managers	5	17 partners each; co-sell 425 more businesses
Sales operations	1	Compensation, deal registration, attribution
Onboarding	2	1 per 190 assisted accounts (≥10 businesses)
Customer success	5	1 per 1,060 businesses; L2/L3 only
Total sales + CS	18	Plus 23 in R&D and G&A — 41 total

Onboarding cannot be human at the long tail. Guided setup, partner-delivered L1 and an AI assistant carry the free-tier volume; assisted onboarding is reserved for accounts of ten businesses or more.

RETENTION THAT KEEPS 5,300 NET

26%
Gross business churn, Year 5 (35% Y1)

936
Replaced before growth

≥100%
NRR the model requires; target 108%

The P&L holds revenue per business flat at $1,842 for five years, so no expansion is assumed. NRR at or above 100% keeps the base intact; 108% would add roughly $0.5M of Year 5 revenue that this plan does not claim. Below 92%, churn starts eating the new-business engine and the plan fails on arithmetic, not on demand.

PROVEN AND INSTRUMENTED BY END OF YEAR 4 — LEADING INDICATORS

INDICATOR	THRESHOLD	MEASURED ON
Marketplace install → paid	≥6%	≥15,000 installs
Free tool → paid	≥1.5%	CAC ≤ $250
Partner-sourced new businesses	≥120 / mo	Dec Year 4
Partner repeat rate	≥40%	Second cohort ≤90 days
Time to first shipment documented	<48 h	70% of new accounts
Year 3 cohort NRR	≥100%	12 months post-close
Support load	<40 tickets	Per 1,000 businesses / month
Hainan RMB invoicing	≥100 accounts	Paying, not trials

These are the numbers that authorise the Year 5 spend. Each is a rate or a velocity measured on live accounts — not a pipeline promise.

FAILURE MODES AND THE TRIPWIRE FOR EACH

Channel conflict. Deal registration and partner-owned pricing; direct reps are excluded from registered accounts. *Tripwire:* >10% of partner accounts contested.
Partner dependence. No channel above 36% of new businesses; self-serve is the largest at 35.7%. *Tripwire:* one channel above 40%.
Regulatory and cross-border data. PIPL-compliant residency in Hainan, a documented transfer mechanism for buyer messages, platform terms reviewed per integration. *Tripwire:* any integration without a written data-flow map.
Support load. AI resolves ~80% of L1; 5 specialists handle roughly 40 human tickets a month. *Tripwire:* tickets per 1,000 businesses rising two quarters in a row.
Ramp off track. *Tripwire:* under 60 partner-sourced businesses a month by Q2 Year 4 — re-phase to the base case instead of spending into a wall.

RECONCILIATION TO THE MODEL

Businesses: 1,900 opening − 936 churned + 4,336 gross new = 5,300 exit · **CAC:** $2.60M ÷ 4,336 = $600 blended, 4.1-month payback · **If Year 4/5 conversion halves:** 2,650 businesses, $3.3M revenue, +$24k EBITDA — a real business, not the $6.6M plan.

FIVE-YEAR PLAN · ALL FIGURES USD

The $10M cap is a choice, not a limit we hit.

Revenue is earned on average businesses; exit ARR is higher.

USD 000S	YEAR 1	YEAR 2	YEAR 3	YEAR 4	YEAR 5
Registered reach	350	1,800	9,000	38,000	100,000
Paying conversion, exit	3.43%	3.89%	4.44%	5.00%	5.30%
Paying businesses, average	6	41	235	1,150	3,600
Subscription · $1,667 / business / yr	10	68	392	1,917	6,000
Media commission · $175 / business / yr	1	7	41	201	630
Total revenue	**11**	**76**	**433**	**2,118**	**6,630**
Gross profit	**10**	**68**	**397**	**1,955**	**6,142**
Gross margin	89.4%	90.7%	91.7%	92.3%	92.6%
Total operating expense	**422**	**630**	**1,159**	**2,393**	**4,414**
EBITDA	**(412)**	**(561)**	**(762)**	**(438)**	**1,728**
EBITDA margin	n.m.	n.m.	-176.1%	-20.7%	26.1%
ARR at exit	22	129	737	3,499	9,761

Reach is given; conversion is the assumption that binds. Revenue is recognised on average businesses (opening + closing ÷ 2), so Year 5 revenue sits below exit ARR — the base is still growing through the year. USD at 7.20 RMB/USD; no RMB figures appear in the statements.

The cap binds, not the market

Year-5 exit ARR is $9.76M — $239k under the ceiling. What limits the plan is conversion and ARPU, not the 100,000 registered businesses behind them.

One engine, one number

Revenue per paying business is $1,842 in every year — $1,667 subscription plus $175 commission. Change any assumption and the whole model moves together.

Margin improves with scale

Gross margin moves 89.4% → 92.6% as inference falls from $8 to $4 per business per month and infrastructure is spread across more tenants. Commission is 9.5% of revenue, $0.63M in Year 5.

REACH IS NOT REVENUE

A hundred thousand registered. 5,300 pay.

The 350 → 100,000 figures are registered reach. Paying businesses convert on top of that.

FROM REACH TO REVENUE	YEAR 1	YEAR 2	YEAR 3	YEAR 4	YEAR 5
Registered reach	350	1,800	9,000	38,000	100,000
× paying conversion	3.43%	3.89%	4.44%	5.00%	5.30%
Paying businesses, exit	**12**	**70**	**400**	**1,900**	**5,300**
Subscription per business per year	$1,667	$1,667	$1,667	$1,667	$1,667
Media commission per business per year	$175	$175	$175	$175	$175
Revenue per paying business per year	$1,842	$1,842	$1,842	$1,842	$1,842
ARR at exit	**22**	**129**	**737**	**3,499**	**9,761**
Revenue recognised in year	**11**	**76**	**433**	**2,118**	**6,630**
Cap test: ARR ÷ $10M	**0.2%**	**1.3%**	**7.4%**	**35.0%**	**97.6%**

If all 100,000 registered businesses paid, revenue would be $184M — eighteen times the cap. The model therefore separates reach (free tools) from paying businesses (conversion) and caps the plan at 5,300 paying businesses — $9.76M of exit ARR, $0.24M under the ceiling. Year 5 revenue is lower than ARR because the base is still growing through the year.

YEAR 1–2 · 3.4% → 3.9%

Founder-sold into about 40 named accounts in two or three exporting clusters. Conversion is high because every account is hand-closed — and the denominator is only 350 to 1,800 registered businesses.

YEAR 3–4 · 4.4% → 5.0%

Associations, chambers and marketplace-seller programmes deliver pre-qualified accounts. Reach grows about 4× a year, yet conversion rises as the document engine and compliance library become the reason to pay, not the free checker.

YEAR 5 · 5.3%

Free tools — compliance checker, rate predictor — carry the last 62,000 registrations. Conversion keeps rising on account expansion and multi-user adoption rather than a flat rate. This is the stage that is least certain, and the sensitivity page shows what a halving costs.

THE ARITHMETIC, STATED PLAINLY

At 100,000 registered businesses and $1,842 of ARPU, a 100% conversion would be **$184M** of ARR — still 18× the cap. **The plan needs 5.3%:** 5,300 paying businesses, $9.76M of exit ARR, $6.63M recognised, $239k of headroom under the cap.

The 100,000 registered businesses are a reach assumption supplied by the company. The 5.3% conversion path is management's estimate at each stage, not a measured cohort rate — there is no cohort to measure yet.

STATEMENT OF PROFIT AND LOSS · USD 000S

Every line, every year, nothing in a footnote.

Revenue is earned on average businesses. Partner share sits inside sales & marketing. The final row is what this cheque alone leaves unfunded.

Cash at year-end · this cheque only	(162)	(723)	(1,486)	(1,923)	(196)

Revenue is recognised on average businesses. Partner revenue share is a one-time payment on each new business sold through a revenue-share partner and sits inside sales & marketing, where the CAC is already counted — putting it in cost of revenue too would double count it. The last row is cumulative EBITDA plus the $250,000 cheque: negative is capital still to be raised.

THE UNCOMFORTABLE LINE

Year 1 as modelled burns **$412k** of EBITDA, not $250k. Cash bottoms at **−$2.17M** in Q4 Year 4 — acquisition spend lands before the revenue it buys.

WHAT THIS CHEQUE COVERS

Tranche 1 — **11.5%** of the $2.2M requirement: entity, compliance library and the first GTM hires, not the scale-up.

WHAT DOES NOT MOVE

$1,842 revenue and $1,706 gross profit per average business in Year 5; **92.6%** gross margin.

YEARS 4–5 · QUARTERLY DETAIL

Cash bottoms at −$2.2M, then the line turns.

QUARTERLY, NOT ANNUAL

USD 000S · QUARTERLY	Y4 Q1	Y4 Q2	Y4 Q3	Y4 Q4	Y5 Q1	Y5 Q2	Y5 Q3	Y5 Q4
Gross new businesses	416	442	469	495	1,001	1,056	1,112	1,167

Ending paying businesses	**775**	**1,150**	**1,525**	**1,900**	**2,750**	**3,600**	**4,450**	**5,300**
Average paying businesses	588	962	1,338	1,712	2,325	3,175	4,025	4,875
Subscription	245	401	557	714	969	1,323	1,677	2,031
Media commission	26	42	59	75	102	139	176	213
Total revenue	**270**	**443**	**616**	**788**	**1,070**	**1,462**	**1,853**	**2,245**
Gross profit	250	409	568	728	992	1,354	1,717	2,079
EBITDA	**(175)**	**(131)**	**(87)**	**(44)**	**98**	**321**	**543**	**765**
Cumulative EBITDA	(1,911)	(2,042)	(2,130)	(2,173)	(2,075)	(1,754)	(1,211)	(446)

Businesses build linearly inside each year, so the four quarterly revenue lines sum exactly to the annual P&L. Churn is the annual rate ÷ 4 on quarterly average businesses and sums to the annual 936 businesses in Year 5. Cumulative EBITDA carries the Year 1–3 deficit in, which is why it starts below zero.

Q4 YEAR 4 IS THE LOW POINT

495 new businesses at $650 each is **$322k of spend** against $788k of revenue in the same quarter. Cumulative EBITDA bottoms at **−$2.17M** before it turns.

THE TURN, AND WHAT IS LEFT

Quarterly EBITDA crosses zero at **+$98k** in Q1 Year 5 and stays positive: $1.73M across Year 5. The cumulative deficit still closes the year at **−$0.45M** — that is the gap a second tranche has to cover.

WHY Q4 IS LARGER THAN A QUARTER OF THE YEAR

The full-year $6.63M is earned on **3,600 average** businesses. Q4 runs at $2.25M — a **$9.0M annual rate** — because the base exits the year at 5,300 businesses.

Every quarterly revenue line sums to its annual figure. Churn is applied at one quarter of the annual rate to quarterly average businesses, which is what makes the reconciliation exact rather than approximate.

A 3.1× final year, not a ten-times story.

REVENUE · LOG SCALE

Revenue — · Gross profit - - -

PAYING BUSINESSES · LOG SCALE

Plan — · Base case - - -

$1,842
REVENUE PER AVERAGE BUSINESS, EVERY YEAR

92.6%
GROSS MARGIN AT YEAR 5

26.1%
EBITDA MARGIN AT YEAR 5

$2.17M
PEAK FUNDING REQUIREMENT · Q4 YEAR 4

Year 5
FIRST EBITDA-POSITIVE YEAR

Log axes are used because the plan spans three orders of magnitude; a linear chart would hide Years 1–3 entirely. Gross profit tracks 92% of revenue, so the two lines nearly coincide. The base-case line is the same plan with Year 4/5 conversion halved — see the sensitivity page. Growth slows every year: 6.8×, 5.7×, 4.9×, 3.1× on revenue.

ONE BUSINESS, FIVE YEARS

Four months to payback, eleven times the CAC.

PER BUSINESS, USD	YEAR 1	YEAR 2	YEAR 3	YEAR 4	YEAR 5
Revenue per average business	1,842	1,842	1,842	1,842	1,842
Gross profit per average business	1,646	1,670	1,688	1,700	1,706
Blended CAC	1,200	900	750	650	600
CAC payback, months	9	6	5	5	4
Annual churn	35%	32%	30%	28%	26%
LTV (gross profit ÷ churn)	4,703	5,219	5,627	6,072	6,562
LTV : CAC	4×	6×	8×	9×	11×

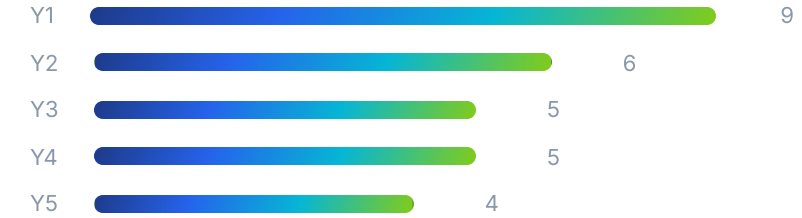

LTV is undiscounted gross profit divided by annual churn — deliberately conservative, no expansion revenue, no commission growth.

WHAT THE TABLE MEANS

Each $600 of CAC buys **$6,562** of undiscounted gross profit and returns the cash inside **four months**. The plan still loses money until Year 5 because acquisition runs ahead of payback — not because a business is unprofitable.

Commission is 9.5% of revenue and carries no delivery cost beyond the payment fee. It is why gross margin holds at 92.6% while businesses scale, and why price is not the lever we pull to fix a bad year.

CAC PAYBACK, MONTHS

WHERE THE $600 CAC COMES FROM

Across the Year 5 channel mix, **$0.53M** of the $2.60M goes to partners as revenue share — about $259 per share-bearing business, roughly 14% of first-year revenue. The balance funds enablement, co-marketing and the self-serve funnel. The channel page breaks the $600 down, and the total ties back to this P&L line.

If it is wrong: CAC +50% still leaves a $6.63M revenue plan delivering $0.43M of EBITDA — see the scenario table.

WHAT DECIDES THE PLAN

ASSUMPTIONS, NOT FORECAST

The plan is limited by conversion, not by market size.

FOUR NUMBERS CARRY THE PLAN — AND THE COST OF EACH BEING WRONG

1 · Conversion holds	5.3% in Year 5 — 5,300 of 100,000. If Year 4/5 conversion halves, Year 5 revenue is $3.3M and EBITDA roughly break-even at +$24k. This is the assumption doing most of the work.
2 · Price holds at $139	At $120 per business per month, Year 5 revenue is $5.81M and EBITDA 16.2% — profitable, but a smaller business.
3 · CAC stays ≤ $600	CAC +50% costs $1.30M of Year 5 EBITDA, takes the margin to 6.4%, and deepens the trough to −$3.1M.
4 · Churn holds at 26%	LTV:CAC is 11× at 26% churn; at 35% it is 8×. No expansion revenue is assumed to offset it.

THE BASE CASE, STATED PLAINLY

If Year 4 and Year 5 conversion halve — 2,650 businesses instead of 5,300 — the business reaches **$3.3M of revenue and +$24k of EBITDA in Year 5**, with a $2.4M peak requirement.

That is a real business, not a venture outcome. We are not claiming the plan survives it: the conversion rate is what has to be earned, and the Year 4–5 step is where it is hardest.

What would falsify the plan fastest

A marketplace that restricts API access, a compliance error that damages a customer's shipment, or a price war from a marketplace-owned tool. Each has a mitigation on the risk page.

SCENARIO	YEAR 5 BUSINESSES	REVENUE	EBITDA	PEAK FUNDING
Plan — 100k reach at 5.3% conversion	**5,300**	**$6.6M**	**$1.7M · 26%**	**($2.2M)**
Base — Year 4/5 conversion halves	2,650	$3.3M	$24k · 1%	($2.4M)
ARPU at $120 per business per month	5,300	$5.8M	$940k · 16%	($2.5M)
Blended CAC +50%	5,300	$6.6M	$427k · 6%	($3.2M)
Lean — hiring held back	2,200	$2.9M	$221k · 8%	($1.8M)

Peak funding is the lowest point of quarterly cumulative EBITDA, not the year-end figure: acquisition spend lands before the revenue it buys.

THE TEAM

Operators first, org chart second.

Four functions have to be excellent for this to work: export sales, compliance, platform engineering and distribution. The first three exist today; the fourth is what this round hires.

COMMERCIAL

Founder / CEO. Owns the customer relationship, pricing and the first 40 accounts. Sells until the playbook exists.

PRODUCT & PLATFORM

CTO. Owns the five-object data model, the compliance engine and the integration surface.

COMPLIANCE & TRADE OPS

Head of compliance. Encodes the country rule graphs, owns accuracy and signs off on every market we cover.

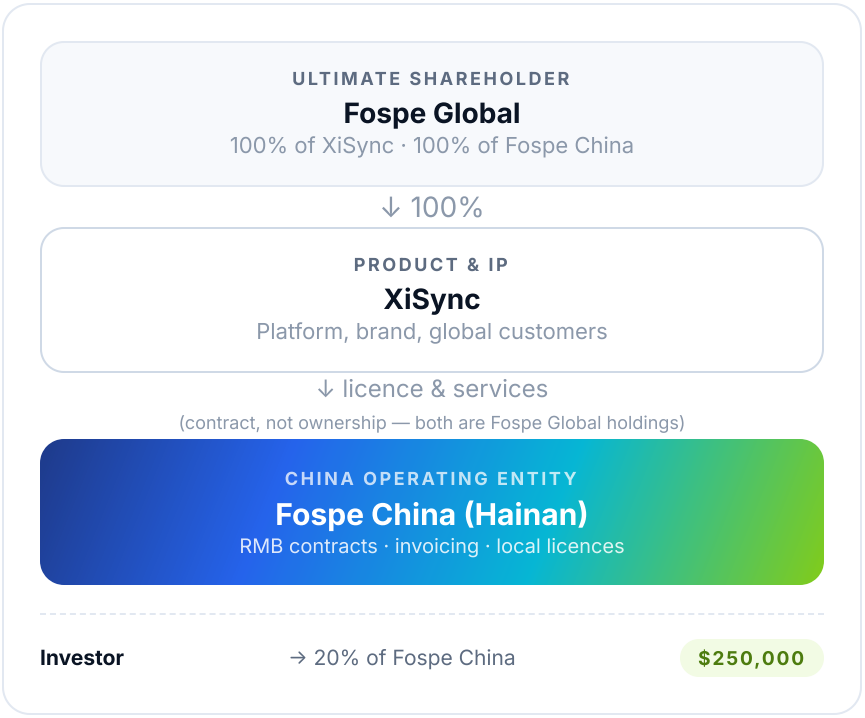

HIRING WITH THIS ROUND

Head of growth plus two sales and one customer-success hire. The distribution motion that turns the channel plan on the surrounding pages into a number.

Named biographies, employment history and references are in the data room. This page describes the roles the plan depends on, not a claim about headcount today.

THE STRUCTURE

Where the 20% sits.

The intercompany licence fee and transfer-pricing terms between XiSync and Fospe China will be set in the definitive agreements and disclosed before closing. Flagging it here because it is the first question a good lawyer asks.

THE ROUND

A quarter of a million for a fifth of Fospe China.

INVESTMENT	SHAREHOLDING	PRE-MONEY	POST-MONEY
$250,000	**20%**	**$1.00M**	**$1.25M**
Single tranche, 30-day close	Fully diluted, in Fospe China	$250k ÷ 20% − $250k	$1.00M + $250,000

This cheque is **tranche 1** of a $2.2M plan — 11.5% of the peak requirement. It funds Phase 1 (entity, compliance library, first hires) to month 12; the next page sets out what that buys and what it does not.

WHAT THE 20% IS

- Equity in the Hainan entity that contracts with Chinese customers, issues RMB invoices and holds local licences
- A share of China subscription and media-commission revenue booked by that entity
- Board observer, information rights, pro-rata participation and tag-along — proposed terms
- A first look at the strategic options for the China business as it scales

WHAT IT IS NOT

- Not equity in XiSync's global IP, brand or non-China customers
- Not a guaranteed return, a revenue share floor or a redemption right
- Not a commitment that a later round will price above this one
- Not a claim of existing traction — there is none to buy

HOW TO READ THE VALUATION

$1.25M post-money buys 20% of a pre-revenue China operating entity whose value is the compliance rule base, the platform and the Hainan contracting position. It is priced as a pre-seed cheque: small enough to close quickly, large enough to fund the entity, the compliance build and the first go-to-market hires.

WHAT THE CHEQUE BUYS

What $250,000 buys, and the $162k gap.

Detailed budget and hiring plan are in the data room. Spend is reported against this table at each information-rights date.

ALLOCATION OF USD 250,000	AMOUNT	SHARE	WHAT IT BUYS
Compliance rule library & regulatory data	$65,000	26%	Six per-country field libraries, eight document types, readiness engine hardened
Product engineering	$60,000	24%	Direct ad desks, product studio, rate engine, credit pre-assessment, marketplace connectors
Go-to-market	$60,000	24%	Two sales hires, one customer-success hire, channel enablement
Hainan entity	$30,000	12%	Incorporation, licences, banking, RMB collection, legal and tax setup
Working capital & contingency	$35,000	14%	Six months of buffer against hiring or collection slippage
Total	**$250,000**	**100%**	**Phase 1 — entity, libraries and first hires**

This cheque funds Phase 1 of a $2.2M plan, not the whole plan. Allocation is management's plan and will be reported against at each information-rights date.

WHAT THIS CHEQUE DOES NOT BUY

No field sales team, no paid acquisition at scale, and no second market's compliance library beyond the six. Those are Phase 2 spend, and they are contingent on the month-12 milestones being met — not on raising the next cheque.

MILESTONES AT MONTH 12

Entity — Fospe China live: RMB contracts, invoicing, collection

Businesses — 350 registered, 12 paying, $22k of exit ARR

Compliance — six country libraries in production, eight document types, change-feed specification

Media — direct ad accounts opened; first commission revenue at pilot scale

Inbox — WhatsApp Business approval filed, connector in build

Channel — reseller programme launched, first agreements targeted

THE CAPITAL PATH, STATED OPENLY

Peak funding requirement is **$2.17M**, at its lowest point in Q4 Year 4, when acquisition spend lands ahead of the subscription it buys. **This round is tranche 1 — 11.5% of it.** Year 1 as modelled costs $412k against the $250k raised, so the first **$162k** gap has to close through an earlier second close or a slower first-year hire plan before the month-12 milestones are reachable.

If no follow-on is raised, the plan re-phases to the lean path: 2,200 businesses and $2.9M of revenue by Year 5, with a $1.8M peak requirement.

Six ways this breaks, and the answer to each.

RISK	MITIGATION, AND WHAT WOULD TELL US IT IS FAILING
1 · SMEs will not pay $139 a business	Annual prepay, a 90-day outcome-based pilot, and a price ladder anchored on the media commission. *Signal:* fewer than 6% of trials convert to paid in Year 1. The $120 price case is modelled.
2 · Marketplace API dependency	Direct integrations plus browser-level automation where an API is absent, and a multi-channel catalogue that does not depend on one partner. *Signal:* a partner changes access terms on less than 90 days' notice.
3 · A compliance error costs a customer a shipment	Field-level source citations, human review for unverifiable fields, explicit decision-support positioning, professional indemnity cover, and a readiness score rather than a promise. *Signal:* a rejected shipment traced to our output.
4 · AI inference cost or quality	Model routing by task, caching of stable documents, and a monthly cost-per-business target that is reviewed against the 92.6% gross-margin plan. *Signal:* inference above $12 per business per month for two consecutive quarters.
5 · Messaging platform policy	Business-partner status, template compliance, and a multi-channel architecture so losing one channel degrades but does not stop the inbox. *Signal:* API rate or template rejection rates rising.
6 · Capital — the plan needs $2.17M, this round is $250k	Staged hiring tied to business milestones, revenue-first go-to-market, and the documented lean path at $1.8M. *Signal:* fewer than 6 paying businesses at month 12, which triggers a hiring freeze rather than a bridge round.

THE ASK

USD 250,000 for 20% of Fospe China

Next step: data room access, then five customer interviews with exporters in the target segment — before you commit, not after.

A hundred thousand registered. 5,300 pay.

USD 250,000 for 20% of Fospe China (Hainan) · $1.25M post-money · twelve months to a live Hainan entity, six compliance libraries, 12 paying businesses and the first media-commission revenue. The capital goes into earning the conversion, not into buying reach.

STEP 1

Data room: model, assumption register, entity documents

STEP 2

Five exporter interviews in your presence

STEP 3

Definitive documents and a 30-day close

EVERY INPUT, LABELLED

The model, exposed line by line.

If a number in this deck is not on this page, it is derived from one that is.

DRIVER	Y1	Y2	Y3	Y4	Y5
Registered reach (given)	350	1,800	9,000	38,000	100,000
Paying conversion at exit (assumption)	3.4%	3.9%	4.4%	5.0%	5.3%
Paying businesses at exit (calculated)	12	70	400	1,900	5,300
Price per paying business per month (given)	$139	$139	$139	$139	$139
RMB anchor and rate	1,000 RMB ÷ 7.20	same	same	same	same
Media adoption / spend (assumption)	35% / $417	same	same	same	same
Commission per paying business per year	$175	$175	$175	$175	$175
Blended CAC (assumption)	$1,200	$900	$750	$650	$600
Annual churn (assumption)	35%	32%	30%	28%	26%
Inference cost / business / month	$8.00	$6.00	$5.00	$4.00	$4.00
Cloud cost / business / month	$4.00	$4.00	$3.50	$3.50	$3.00
Loaded cost per head	$45,000	$47,000	$50,000	$53,000	$56,000
Headcount	11	15	22	29	40
Payment processing	1.5%	1.5%	1.5%	1.5%	1.5%

Given = supplied by the company. Assumption = management estimate, open to diligence. Calculated rows are derived in the model and tie to the statement of profit and loss.

METHOD

Revenue is recognised on the average of opening and closing paying businesses, which is deliberately conservative against a plan that grows every month. Subscription = average businesses × $1,667. Commission = average businesses × 35% buying × $417 × 12 × 10%, or $175 per average business.

Paying businesses are the plan, not reach. Exit ARR is capped under $10M — 5,300 businesses, $9.76M — so Year 5 is constrained by conversion and ARPU, not reach. Paying is 0.106% of the 5M market; registration is 2%.

Gross new businesses = net additions + churned businesses (churn on average businesses). Sales and marketing = gross new businesses × blended CAC and includes partner revenue share. The quarterly engine uses the same assumptions, so quarters sum to the annual line.

NOT IN THE MODEL

Expansion revenue from existing accounts (business growth and ad-budget growth are captured only through the business target), any financing income, any grant or subsidy, and any revenue from non-China customers. All of these would improve the numbers; none is claimed.

DISCLAIMER

XiSync is pre-revenue. This is a projection exercise and an offer outline, not an offer of securities or a guarantee of performance. Forward-looking figures rest on assumptions that may not be realised; any investment is subject to definitive documentation and local legal and tax advice.

AUDITED AGAINST THE CODEBASE, NOT THE ROADMAP

What is built, what is not, named plainly.

Prepared for diligence. Where a surface is a prototype, the deck says so on the page that makes the claim.

CAPABILITY	STATUS	IN THE CODE TODAY	NEXT BUILD
Country compliance fields	PROTOTYPE	Readiness engine over 8 document types and 4 market blocs; console on sample records	Per-country field graph, auto-fill, regulation feed
Global media buying	PROTOTYPE	Campaign orchestration, spend ledger with caps, pre-flight creative screen	Live Meta, Google and TikTok APIs; billing
Alibaba / Made-in-China	PROTOTYPE	ICBU-shaped adapter, catalogue model, two-way sync job	Seller authorisation, app review, live listings
Product studio	PARTIAL	Veo video client and job UI; template-rendered visuals on 7 demo SKUs	Server render queue, asset storage, generated images
Multilingual website	PROTOTYPE	Builder UI, section model, multilingual content structure	Publish pipeline, domains and SSL, portal login
Omnichannel inbox	PARTIAL	Tenant-scoped conversation store, channel tags, handover, reply composer	WhatsApp, Meta, TikTok and Snapchat delivery
Shipping prediction	PARTIAL	Eight-lane rate and transit model across FCL, LCL, air and rail	Carrier APIs, live spot rates, deviation alerts
Credit eligibility	PROTOTYPE	Seven-input weighted score with a static country-risk table	Sinosure and bureau data, application workflow
CRM and deals	LIVE	Leads, accounts, contacts, deals and shipments on Postgres	Forecasting, activity automation
Tenant workspace	LIVE	Tenants, profiles, tenant-scoped queries and roles	SSO, audit log

Live = working code on the real database. Partial = the core works and the integration is missing. Prototype = UI and logic against simulated endpoints. Evidence: the API routes and schema for the CRM, and service adapters for marketplace, media, studio, shipping and credit; the full file-level audit is in the data room.
